SQL ANALYSIS · MYSQL 8.0

Bank Customer Churn

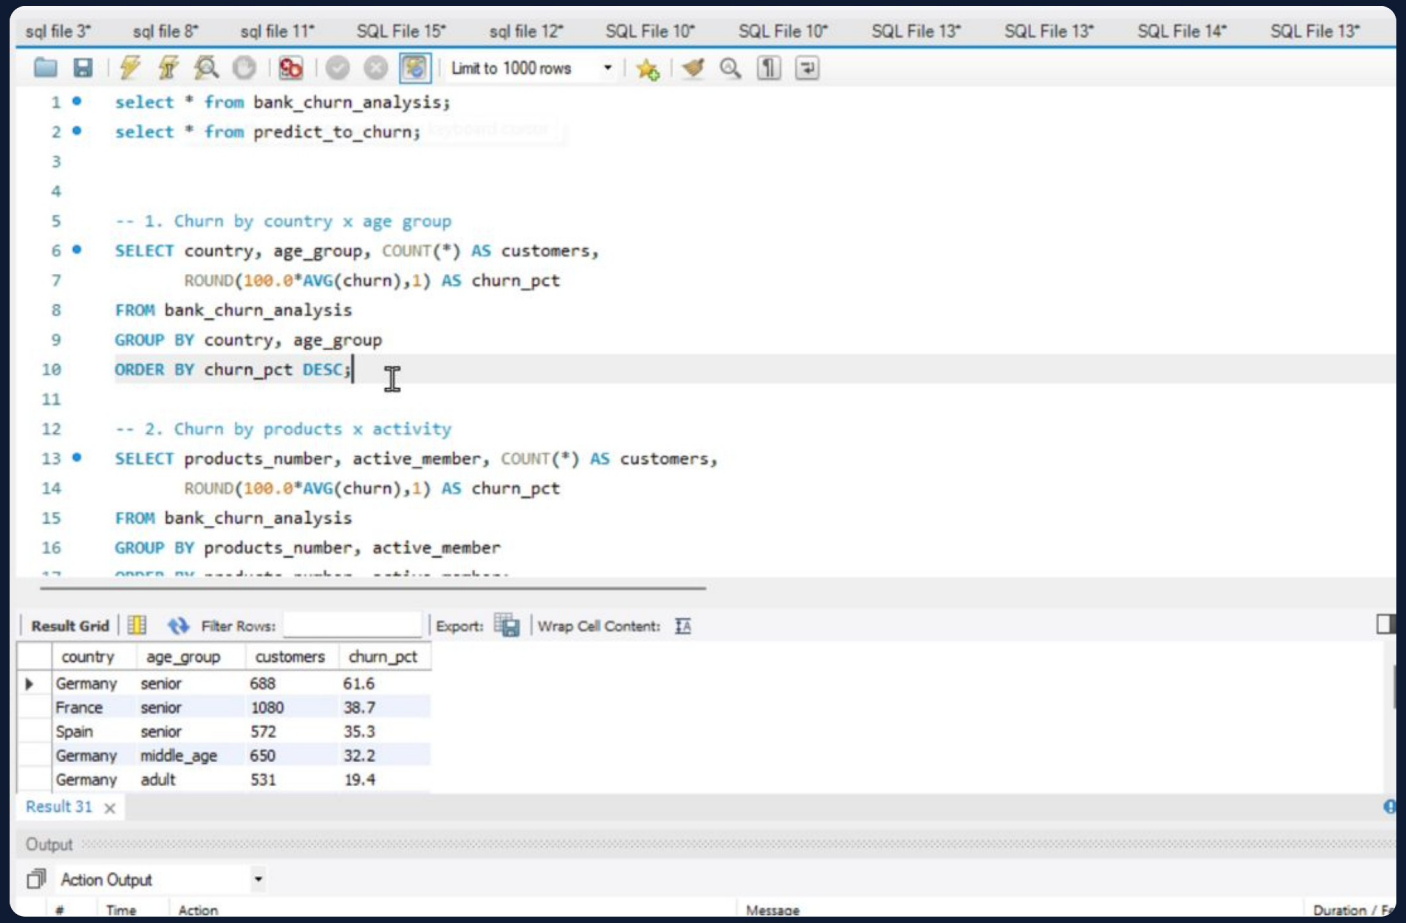

Five queries on 10,000 customers across France, Spain and Germany

Mohammed Rizwan · Table: bank_churn_analysis

SQL query 1

Churn by country and age group

- **Germany seniors: 61.6%** churn (688 customers)
- France seniors 38.7%, Spain seniors 35.3%
- Germany middle age: 32.2%

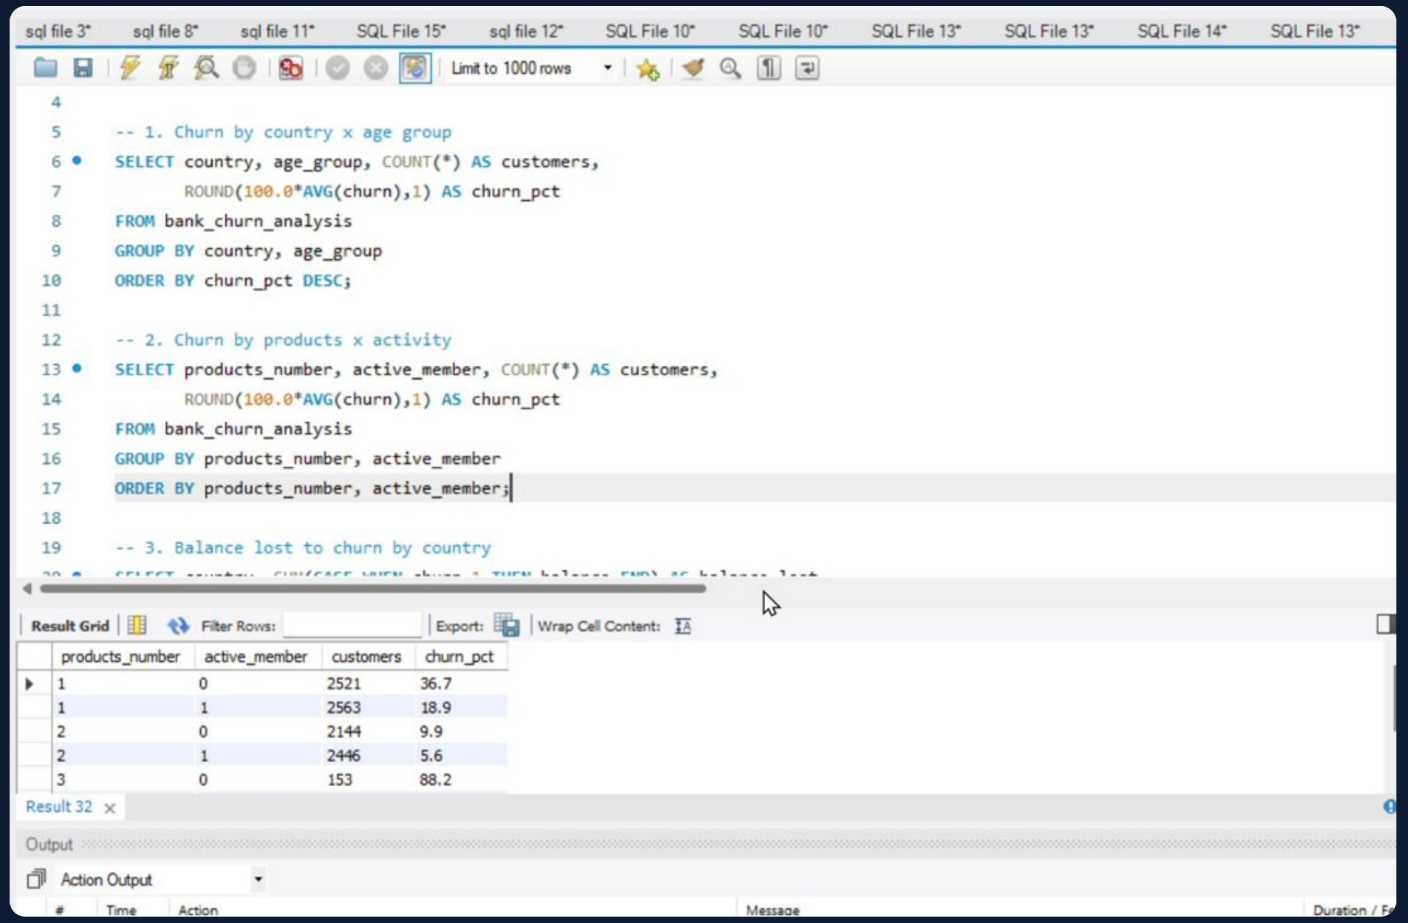

Query: GROUP BY country, age_group · 12 rows

SQL query 2

Churn by products and activity

- **Inactive, 3 products: 88.2%** (153 customers)
- Inactive, 1 product: 36.7% (2,521)
- Active, 2 products: 5.6%, the lowest

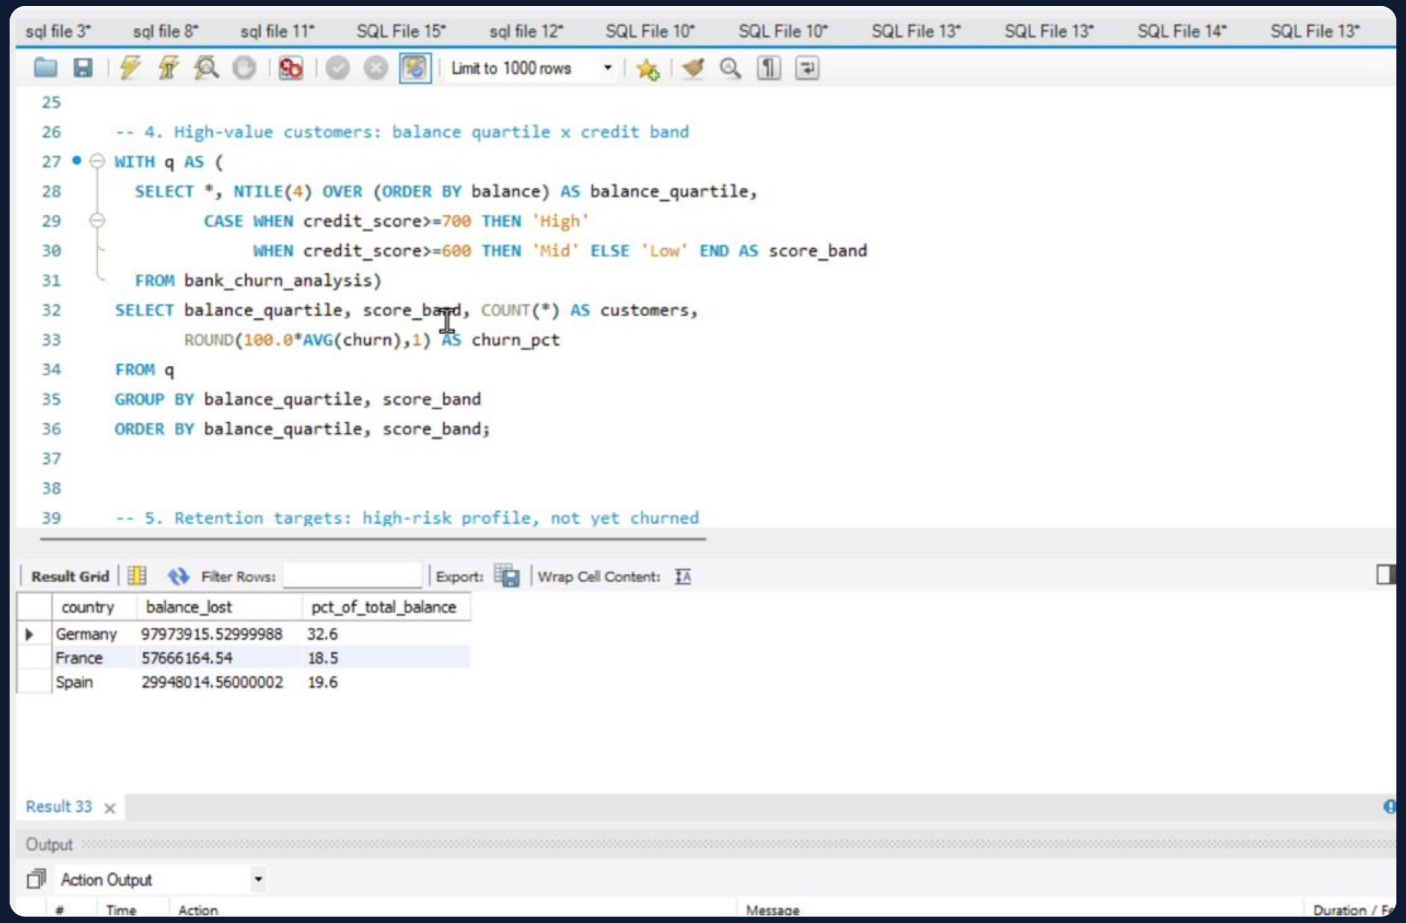

Query: GROUP BY products_number, active_member · 8 rows

SQL query 3

Balance lost to churn by country

- **Germany: 97.97M**, 32.6% of its balance
- France: 57.67M (18.5%)
- Spain: 29.95M (19.6%)

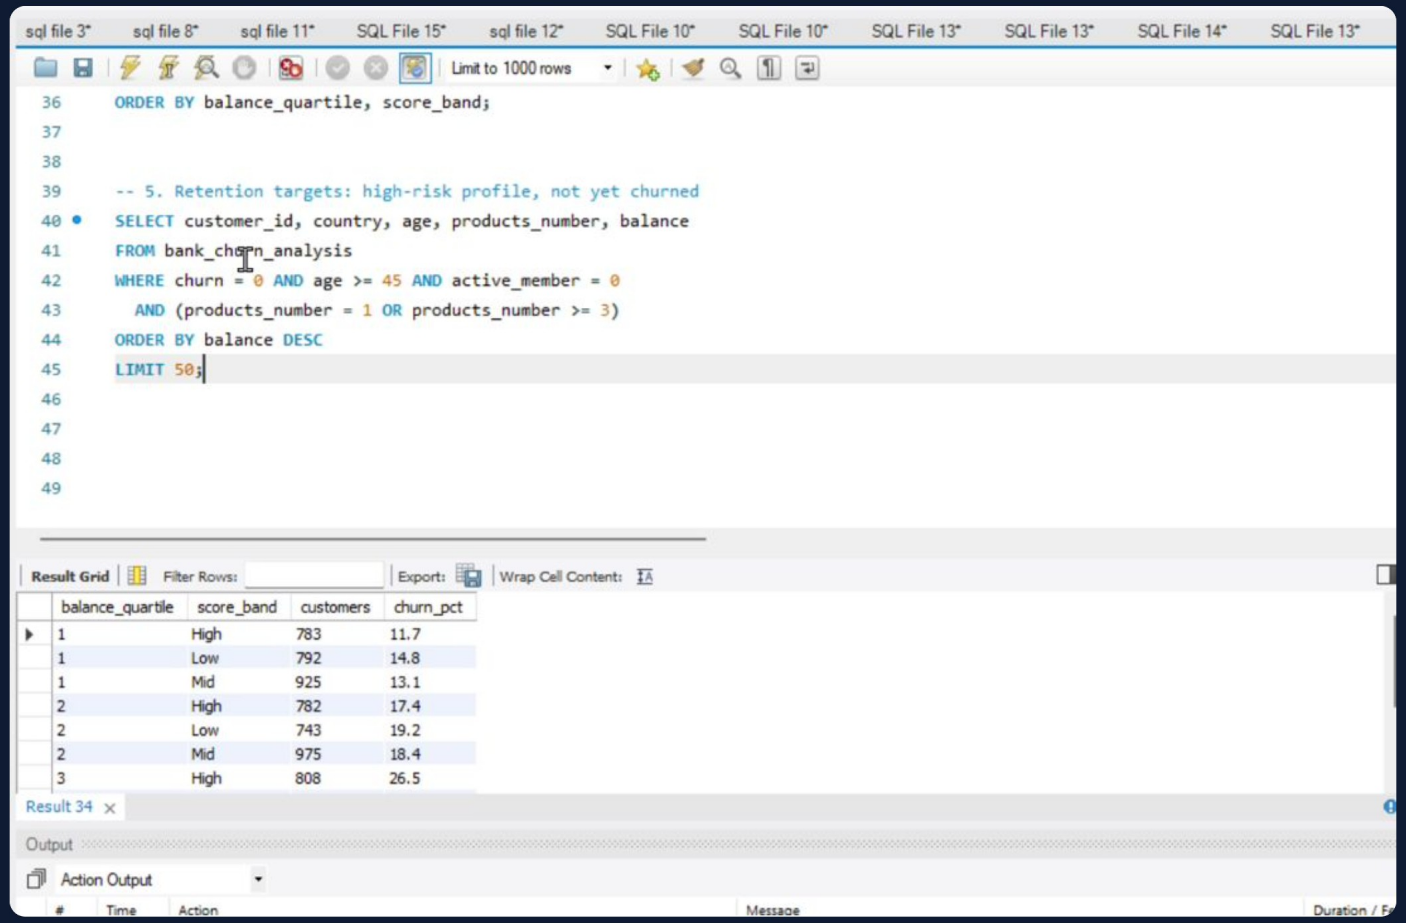

Query: SUM of balance where churn = 1, per country

SQL query 4

Balance quartile and credit band

- Churn rises with balance: 11.7–14.8% in quartile 1
- **17.4–19.2%** in quartile 2
- 26.5% for high-credit customers in quartile 3

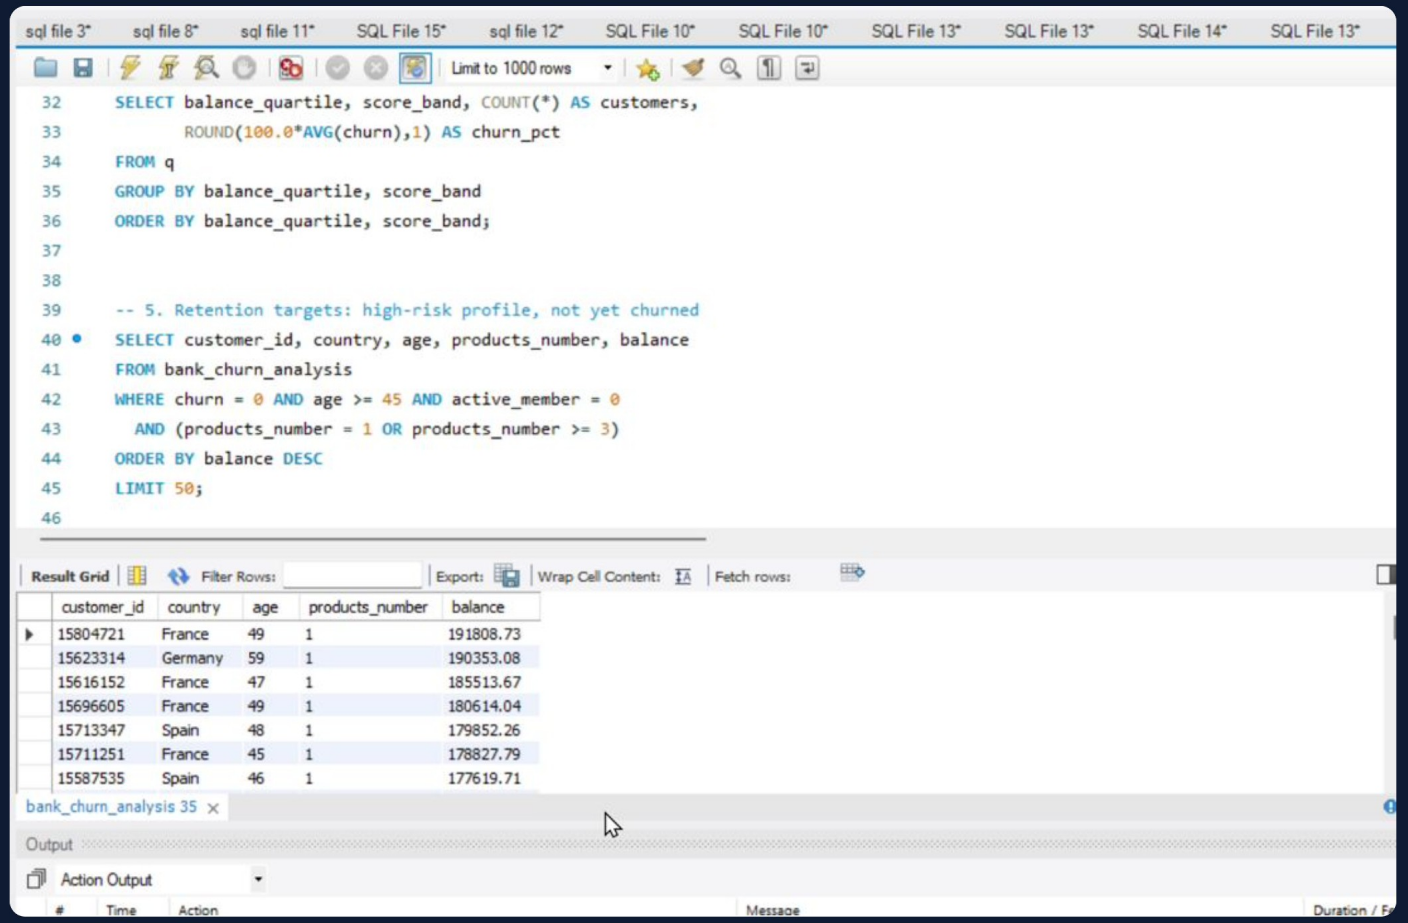

Query: NTILE(4) by balance · High ≥ 700, Mid ≥ 600, Low

SQL query 5

Retention targets not yet churned

- Filter: churn = 0, age 45+, inactive
- Products: exactly 1, or 3 and above
- **Top 50 by balance**, starting near 191.8K

Query: ORDER BY balance DESC LIMIT 50

Key takeaways

Where

German seniors churn at 61.6% and Germany loses the most balance, 97.97M.

Who

Inactive customers with 1 or 3 products churn far more than active two-product customers.

Action

Contact the top 50 high-balance, inactive, 45+ customers before they leave.
